FUNCTION: THIS PRECIFIC METHYLASE RECORDIZES THE DOUBLE-STRANDED SEQUENCY
GGATCC, CAUSES SPECIFIC METHYLATION ON C-5 ON BOTH STRANDS, AND
PROTECTS THE DNA FROM CLEAVAGE BY THE BAMHI ENDONUCLEASE.
CATALYTIC ACTIVITY: S-adenosyl-L-methionine + DNA cytosine = S-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               32
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            21

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a number of prostate-specific sequences derived from the human PS118 gene. These can be used in the detection, monitoring and treatment of prostate diseases, particularly prostate cancer. The present sequence is a PS118 protein fragment of the invention. The coding sequences of the invention were isolated from a prostate tissue expressed sequence tag (EST) library.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel PS118 polypeptide for detecting, diagnosing, staging, monitoring, prognosticating, preventing, treating, or determining predisposition of individual to diseases and conditions of prostate, e.g. prostrate

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    overlapping EST (expressed sequence tag) clones AAV82803-10. The clones were identified from a cDNA library made from prostate tumour tissue. Recombinant PS118 protein is used to detect PS118-specific antibodies, to raise antibodies for detection of PS118 antigens, to screen for specific binding agents (potential therapeutics, and to isolate specific antibodies from serum. Detection of PS118 protein or nucleic acid, which are prostate related, and altered or elevated in prostatic disease, is used for detection, diagnosis, staging, monitoring and prognosis of prostatic disease, particularly cancer, and to identify subjects at risk.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a number of prostate-specific derived from the human PS118 gene. These can be used in the det monitoring and treatment of prostate diseases, particularly procancer. The present sequence is a PS118 protein fragment of the invention. The coding sequences of the invention were isolated prostate tissue expressed sequence tag (EST) library.
                          Detecting presence of target PS118 polynucleotide in test sample, useful for detecting, diagnosing, staging, monitoring, prognostic preventing or treating or determining predisposition to prostate disease -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gee ABA91651), and lacking the N-terminal region. The PS118
Consensus sequence is found at least 12 times more often in
prostate than in non-prostate tissue. PS118 polypeptides,
including derivatives of the present sequence, polynucleotides,
contribodies, agonists and inhibitors are useful for detecting,
contribodies, staging, monitoring, prognosticating, preventing and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC and gene mapping, and in recombinant production of (II). The copyrucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polymucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention.

CC Onte: The sequence data for this patent did not appear in the printed constitution, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC sequence tags (RSTs) for identifying expressed genes or for physical CC mapping of the human genome. The proteins may be used as molecular weight CC markers, or as nutritional sources or supplements. The proteins may be used to maintain and expand cell population in a totipotential correct or supplements. The proteins may be used to maintain and expand cell population in a totipotential or the CC pluripotential state useful for re-engineering damaged or diseased CC tissues, transplantation, manufacture of bio-pharmaceuticals or the CC development of bio-sensors. The polymucleotides and proteins are useful CC protein expression or biological activity, e.g. haematopoietic disorders, contral/peripheral nervous system diseases, mechanical and traumatic CC disorders, non-healing wounds, immune deficiencies and disorders, CC disorders, or cancer. The polymucleotide sequences of the invention were disorders, or cancer. The polymucleotide sequences of the invention were CC assembled from SCTs isolated mainly by sequencing by hybridisation, and CC disorders, sequences obtained from one or more public databases.

CC Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO or this patent did not format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polymucleotides are also used in diagnostics as expressed sequence tags (CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II), (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity amino acid sequences of data and products dependent on DNA and CC amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed constitution, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           expressed at high level in prostatic tumor tissue and encode gene products or their fragments. The products of the invention have antitumor activity. Polypeptides (I) encoded by (A) are used: (i) for identifying agents for treatment of prostatic cancer and (ii) for therapy of prostate cancer, optionally where expressed by gene therapy methods. (A) is also used to isolate full-length genes (for gene therapy) and for recombinant production of (I), which can be used to raise specific antibodies. (A) are identified by assembly of ESTs (expressed sequence tags) before they are analyzed for expression pattern (tissue specificity). This approach eliminates many of the false results, as regards tissue specificity, associated with known methods that use single (usually short) ESTs. AAY48215-Y48303 represent protein fragments
                                                                                                                                              The invention relates to a method of detecting an agent for use in the treatment of herpes virus infection. The method comprises formin a herpes virus polypeptide/zinc complex; adding a test agent to the polypeptide/zinc complex, and detecting any change in the complex. The invention also relates to the use of known agents, such as 2,2'-dithiobisbenzamide (DIBA) and azodicarbonanide (ADA), and unknown agents for the manufacture of a medicament for the treatment of
                                                    herpes virus infections. The method is useful for detecting agents for use in the treatment of herpes virus infection. The present sequence is Herpes simplex virus type 2 (HSV2) IE63 protein homologue
                                                                                                                                                                                                                                                                                                                                                                                                                Claim 6; Fig 1; 43pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           the test agent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Detecting an agent useful for treating herpes virus infection comprises determining any change in a polypeptide/zinc complex in the presence of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 2002-226983/28

ABG06075
The invention relates to isolated polynucleotide (I) and CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polymerase chain reaction (PCR) primers, and in recombinant production of (II). The collectides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC for testore normal activity of (II) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical company of sites expressing (II). (I) and (II) are useful for treating CC imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. CC The polypeptide and polypurelectide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC and no acid sequences. ABG00010-ABG30377 represent novel human continued and acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                    polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PR) primers oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and the protone and polynucleotide sequences have applications.
                                                       and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printer specification, but was obtained in electronic format directly from WI at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 20; SEQ ID No 41174; 103pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Homo sapiens

                                        CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polypeptide (II) sequences, (II) is useful as hybridisation probes, CC polypucleotides are also used in diagnostics as expressed equence tags (II). The CC polypucleotides are also used in diagnostics as expressed sequence tags (II). (II) is useful in gene therapy techniques (II) cristore normal activity of (II) is useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or comparitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating comparing of sites expressing (II). (I) and (II) are useful for treating comparing of sites expressing (II). (I) and (II) are useful for treating comparing of sites expression or biological activity. The polypeptide and polymucleotide sequences have applications in comparing and to produce other types of data and products dependent on DNA and comparing and to produce other types of data and products dependent on DNA and comparation acid sequences. ABG00010-ABG30377 represent novel human comparation, but was obtained in electronic format directly from WIPO are contacted in the printed experification, but was obtained in electronic format directly from WIPO are contacted in the printed expression in the printed experification, but was obtained in electronic format directly from WIPO are contacted the contact and contacted in the printed experification in the printed experification.

                                                                                                                                                                                       CC The invention relates to isolated polynucleotide (I) and.
CC polypeptide (II) sequences. (I) is useful as hybridisation probes,
CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome
CC and gene mapping, and in recombinant production of (II). The
CC polynucleotides are also used in diagnostics as expressed sequence tags
CC for identifying expressed genes. (I) is useful in gene therapy techniques
CC (II). (II) is useful for generating antibodies against it, detecting or
CC (III). (II) a polypeptide in tissue, as molecular weight markers and as
CC a food supplement. (II) and its binding partners are useful in medical
CC imaging of sites expressing (II). (I) and (II) are useful for treating
CC disorders involving aberrant protein expression or biological activity.
CC The polypeptide and polynucleotide sequences have applications in
CC responsible for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC diagnostics mains acid sequences of the invention.
CC diagnostic amino acid sequences of the invention.
CC diagnostic amino acid sequences of the invention.

                                                                                                                                             for identifying expressed genes. (1) is useful in gene therapy techniques (1) or rescore normal activity of (II) or to treat disease states involving (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical (II) after the expressing (II). (I) and (II) are useful for treating (II) are useful activity.

CC diagnostics, forensics, gene mapping, identification of mutations (II) and to produce other types of data and products dependent on DNA and and act as a second of the invention.

CC and to produce other types of data and products dependent on DNA and (II) are useful and sequences of the invention.

CC diagnostic amino acid sequences of the invention.

CC second action, but was obtained in electronic format directly from WIPO (II) are treating the product of the invention.
